Product Description

These center-fed collinear antennas ensure consistent gain and impedance across the operating frequency band and are specifically designed to meet various omnidirectional requirements for mobile radio services in the 806-960 MHz bands. Copper alloy radiating elements are encased in a weatherproof fiberglass low loss housing and permanently attached to a 6061-T6 aluminum support pipe.

Features/Benefits

- Fiberglass construction protects radiating elements in hostile environments - Copper radiating elements minimize possible generation of intermod products - Center-fed design eliminates beamswing across the band
